

**World Class Information Systems, Inc.**

**Product Profile**

**WcBc**

The WcBc software is designed to run on your iSeries™ without any JDEdwards™ Modifications. Our data collection software has an uptime comparable to your iSeries™. WcBc includes complete Receiving, Inventory, Manufacturing, Cycle Counting, and Shipping Transactions.

The WcBc software has a menu-driven interface enabling users to tailor each transaction to meet the requirements. WcBc simplifies the use of each transaction by prompting or defaulting only the fields that the user needs to perform the function. Each of the following Program IDs could have many different transactions for them, and each one could be prompting for different information but processing the same end function.

<b>Description</b>	<b>Program ID</b>	<b>Function</b>
Inventory Issue	P4112	Used to remove inventory from a location.
Inventory Transfer	P4113	Used to transfer material from one location to another.
Inventory Adjustment	P4114	Used to adjust material at a location.
Item Availability Inquiry	P41026	View Inventory by Item, Location, and Lot.
Receiving	P4312	Used to receive items into the facility by Purchase Orders
