Serialization Software

Serialization within CA/KBM™

At World Class Information Systems, Inc., we're always looking for new ways to help you control cost and utilize your existing resources. We know that your company is unique. We understand that you have your individual strengths, custom processes and work flow order. With this in mind we developed Serialization Software for the CA/KBM™ user.

Computer Associates' product Knowledge Based Manufacturing, (CA/KBM™) was written to allow traceability through the Lot Control function. Lot Control offers one level of inventory management. In CA/KBM™ once a Lot Number is assigned to a batch of material, you can maintain its history throughout the entire manufacturing process.

The Lot Control function was designed to offer visibility and traceability to batch material. Batch meaning a standard run or lot size, which is determined by container size, convention, line rates, and/or standard run length. But what about the individual part, item, or component number? How do you trace this information? How do you know where a part has been? Where a component is going? The solution - Serialization Software for the CA/KBM™ user developed by World Class Information Systems, Inc.

Many companies are currently forced to run serialization through a source outside CA/KBM™ or have even resorted to tracking this information manually.

While these methods may provide a workable solution they lack cost effectiveness and accuracy. With duplicate effort and diverse methods of tracking information the probability for errors increases. With World Class' serialization software you gain direct traceability through your current CA/KBM™ software.

By determining if an item, component or part should be serial number controlled at the Item Definition Level, the user will be able to maintain serial number tracking within CA/KBM™. World Class' Serialization Software will only issue one serial number per item, component or part thus ensuring accuracy, reducing data entry errors and freeing up valuable resources for other activities.

With the World Class Information System, Inc., Serialization Software you will now be able to maintain serial number tracking at the Inventory Transaction Processor levels through the following options:

Option 7   - Credit to Stock
Option 8   - Stock Adjustment
Option 10 - Stock to Stock Adjustment
Option 13 - P/O Receipt to Stock
Option 18 - W/O Receipt to Stock
Option 19 - W/O Item to Rework
Option 21 - JIT Receipt to Stock
Option 22 - JIT Item to Rework
Option 24 - Cycle Count
* All Other ITP Transactions
