

Presto: Forgot Password

Forgot Password? We now have the function for Forgot your password on the iSeries password screen.

This function has been needed for years on the iSeries Sign On screen. We now have the capability to have this process due to BCD/Presto system. This process comes with a DB2 file to create a tie to the iSeries User Id and the Email Address. So no more wasting time with Security Administrators resetting passwords, The users can manage this process themselves.

This application resets the Password for the User Id and sends an email to the User Id with the New Password in the email string.

If any issues arise then the Administrator receives an email for the User Id.

Note: This requires that the Security officer (QSECFOR) install this function due to Adopted Authorities of the Forgot Object.
